History and Mission

emovis offers high quality and fast conduct of Phase Ib-IV studies in Berlin. Furthermore, the company's expertise lies in Decentralized Clinical Trials, as a result of the vast experience gained through their Homecare Visits Service, which is offered throughout the EU. We strive for strong, dynamic and success-oriented cooperations in order to fulfil our mission: making the projects as successful as possible! **emovis** is part of FutureMeds, a network of modern, dedicated research sites.

Highlights

We offer:

- The highest service quality paired with dedication and speedy communication, negotiation & project set-ups
- A dedicated patient recruitment team, customized strategies and experience with many different target groups and channels to ensure high recruitment rates
- Our Homecare Service, which is active in 16 European countries and constantly expanding

Services

Dedicated Study Site

- Phase Ib-IV clinical trials for a broad range (120+) of indications
- From feasibility to site selection visits, contract negotiation, the site initiation visit, recruitment of study participants, and the execution of the clinical trial – all tasks are completed within strict timeframes
- As one of **emovis'** key focuses is mental health, we have conducted over 50 depression trials
- We have our own sleep laboratory (3 beds in single rooms) with a video surveillance system for night-time monitoring and state of the art Polysomnographic technology (PSG)

Early Phase Unit

- Our Early Phase Unit focuses on both neurologic and psychiatric phase 1 indications
- Some of our recent successes include Borderline, Major Depressive Disorder, Anxiety, Migraine, Sleep Disorders, Alzheimer & Parkinson trials
- We offer a rare combination of experience, in both early clinical studies and psychiatric/neurological rating skills

Homecare Visits

- Homecare is an important element when it comes to DCTs, bringing the trial to the patient and thus making patient centricity a reality!
- Selected visits are pre-defined in the protocol as optional Homecare Visits, the investigator's role does not change
- The following services can be performed in the patient's home: sample collection, review & collection of diaries, completion of questionnaires, documentation of vital signs, visit documentation, administration of the study drug, etc.
