ISS
INTEGRATED SCIENTIFIC SERVICES
A MEDTECH COMPANY

HISTORY AND MISSION

ISS AG, Integrated Scientific Services provides services to medtech companies for the development of medical devices, their introduction into the market and their maintenance. Typical services include embedded software development, regulatory affairs and clinical evaluation report writing, clinical research, quality management, qualification and validation. The combination of these services with scientific work methods and project management puts ISS AG into a unique position as a service provider for the medtech industry.

HIGHLIGHTS

ISS already has submitted successfully clinical evaluation reports according to MEDDEV 2.7/1 Rev. 4.

With successful product registrations in 99 countries of the world, we are the right partner when it comes to the registration of your product.

Using REGULA™, our web-based RA software, will significantly shorten your time-to-market and offers you instant overview over all your product registrations worldwide incl. deadlines.

Our highly qualified team of software engineers develops embedded and standalone medical software according to IEC 62304.
