HISTORY AND MISSION

Since its inception in 1992, bioskin® has been recognized as a valuable partner for dermatological product development. Starting as a small Contract Research Organization (CRO) specialized in conducting early phase safety and efficacy trials, bioskin® has grown into a full-service CRO offering global strategic consulting and regulatory services and all services for management of Phase I-IV drug trials and claim support/safety studies. bioskin® is headquartered in Hamburg Germany. We are privately-owned.

HIGHLIGHTS

bioskin® is a full-service CRO specialized in dermatology which provides strategic and regulatory consulting, IND and NDA development for dermatology, ophthalmology and women's health products, early phase safety and Proof-of-Concept studies, and global Phase II-IV trials for NCEs, new formulations with known actives and generics.

Our project teams are fine-tuned with members from clinical trial management, monitoring, data management, statistics and medical writing alongside investigators and study nurses. Their flexibility and dedication to quality and detail, coupled with strong expertise and consultancy over the entire field of dermatology, sets us apart from other CROs.
