History and Mission

bioskin is a leading full-service CRO with unique understanding and capabilities for dermatological clinical trials. Recognized by global companies as a valuable partner in trials for drugs, medical devices, food supplements and aesthetics since 1992, bioskin provides early phase safety and Proof-of-Concept studies; vasoconstrictor assays according to FDA guideline; global Phase II-IV trials for NCEs; new formulations with known actives and generics.

bioskin is now part of Eurofins Group.

Highlights

bioskin has performed 600+ clinical trials in 20+ dermatological indications including 30,000+ patients and healthy volunteers with 140+ sites in 12 countries. For global early and late phase studies bioskin partners with selected, reliable vendors throughout Europe, US, Latin America, Central Eastern Europe and South Africa. bioskin manages clinical trials in all dermatological indications with a special expertise in psoriasis, alopecia, aesthetics and wound healing. Our in-house dermatologists consult on study design and interpretation of results.

Services

Phase I and Proof-of-Concept studies at our Research Center

- Risk mitigation by early recognition of cutaneous safety issues
- Unique innovative designs to evaluate efficacy in early clinical development
- Integration of biophysical measurement methods into study designs

Phase II – IV Multinational Trials

- Conduct of multinational dermatology trials across Europe
- Selected SMO/CRO partners for international studies
- Global project leaders and central coordination at bioskin

Clinical Trial Management

- Leading of international crossfunctional teams for late phase as well as for early phase studies
- Submission of clinical trials to ECs and Competent Authorities

Medical Monitoring

- Review of clinical trial protocol and report with dermatological expertise
- Continuous medical oversight ensuring subject safety and trial integrity

Monitoring

- In-house CRAs and team of freelance CRAs
- Risk based monitoring/remote monitoring

Data Operations

- Design and development of eCRFs and clinical database
- Electronic data transfer in SDTM format (CDISC compliant)
- Statistical consultation on study design
- ADaM datasets (CDISC compliant)

Medical Writing

- Clinical trial protocols and reports, informed consents
- Scientific publications
- Lay language summaries
